Q: IOS detect scroll view content position in custom tableViewCell I have custom tableViewCell, and I need to know which cell I have focused when I scroll down the tableView. I can detect if I have focused or not when scroll is stopped, but when I scroll, I can have differents tableViewCell visible on the screen, and I need to know which one is in focus (focused), I need to update some content of a label in the cell. But I need to know what is the position of the current cell when I scroll down. So here is my working code, and I need to modify it to the following: - (UITableViewCell *)tableView:(UITableView *)tableView cellForRowAtIndexPath:(NSIndexPath *)indexPath { // Custom table view cell creation cell = [tableView dequeueReusableCellWithIdentifier:@"CustomCell" forIndexPath:indexPath]; ... if (isFocused == false) { //Do something } if (isFocused == true) //Do something else return cell; } I have found in scrollViewDidScroll method, a method called scrollViewContentOffset, but it is a setter method. A: Did you check out the documentation? There is a property called contentOffset in UIScrollView which holds the y position of the ScrollView at any moment in time, so if you scroll down and keep the finger down, you know you are at the end of the tableView (your bottommost cell). But if you move your finger up, you know you are at the top of the tableView, so this is the way to go. I hope this answers your question, but if it does not, please

elaborate a little bit more on what you have tried and on the data you are trying to retrieve. I received a gold coin today that I wanted to share with you guys. It's the 14th coin in my collection that has a "1" on the back to represent the number of coins I have now. It
